AccuReg

The hardest part of the revenue cycle happens from scheduling through registration. If one piece of data is incorrect, the claim will be denied. Even if you have a streamlined tool to help you, if it's not adaptable, it's just costing you money.

AccuReg Front-End Revenue Cycle solutions have been designed to completely transform your entire revenue cycle. Now these user-friendly and industry-recognized tools include a unique feature called Integrated Intelligence™.

Stop reacting and start preventing

AccuReg – the company that built the industry's top-ranked QA engine – has now taken our front-end solutions even further with Integrated Intelligence™. Our highly sophisticated rules engine and predictive analytics wrap around your entire patient registration process to identify errors in *real time* and *prevent future denials*.

## Self-learning makes your RCM software smarter

Hospitals have spent millions of dollars on software systems to automate processes, but are they doing the job any better? Are your staff and systems getting smarter? Our Integrated Intelligence™ learns from mistakes and self-calibrates to deliver better results.

Integrated Intelligence™

Revolutionary Innovation

- *Flags fatal errors so registrars can correct them*
- *Analyzes your denials to determine why they are happening*
- *Identifies patterns and creates rules to prevent them*

Drives Decisions and Workflows

AccuReg wraps every transaction with rules, industry metrics, and key performance indicators that are programmed into our system. Then our best-in-KLAS QA tool constantly audits patient accounts to drive your staff's workflow in real time.

- **Work Queue** – Alerts registrars of fatal errors, warnings, and opportunities
- **Eligibility Verification** – Red severity codes identify accounts that will be denied unless they are corrected
- **Medical Necessity** – Identifies when an ABN and authorization is required
- **Patient Estimation** - Compares actual vs expected reimbursement to make your estimates more accurate
- **Staff Education** – Assigns training courses based on error patterns to address behavior in real time
- **Reporting/Dashboards** – based on the NAHAM AccessKeys "Good, Better, Best" metrics

Can your existing staff...

- *Increase your front-end, pre-service collections by 30%?*
- *Decrease your first-pass, front-end denials by 50%?*
- *Reduce your A/R by four days?*

...with the tools and training they have today?
