

Eligibility and Benefit Verification

Automated. Benefit Specific. Intelligent.

This is next generation. It is benefit specific real-time eligibility verification powered by artificial intelligence.

Unlike the other real-time eligibility systems of the past that are out there, AccuReg Eligibility and Benefits Verification goes far beyond merely moving transactions from payer to registrar in real-time. It consists of two levels of automation: eligibility verification, plus benefit mapping. We automatically audit real-time eligibility data based on your specific payer rules and denial patterns, and provide intelligent alerts to your registrars for issues such as wrong payer, benefit limitations, etc.

AccuReg A.I. does the heavy lifting, so you never break a sweat.

Our eligibility and specific benefit validation finds needles in the data haystack by machine-reading payer remit data; isolating likely denial-causing payment risks before they occur; and providing an exception-based workflow to the registrar. Our approach even alerts the supervisor if a registrar fails to resolve the issue and prevent the denial. This enables you to hold staff accountable to resolve each issue before the patient receives service. And what about outcomes? AccuReg Eligibility Verification is reducing overall eligibility-related denials by as much as 50% in the first six months of usage. That means more net revenue you've been missing.

“Since implementation of AccuReg, our registration proficiency has increased tremendously. Incorrect information caught at registration, less insurance claim denials due to insurance eligibility reviewed and less reworks. AccuReg staff are professional, personable and efficient in all aspects from development to staff training. We would highly recommend AccuReg to any facility seeking to improve the registration process.”

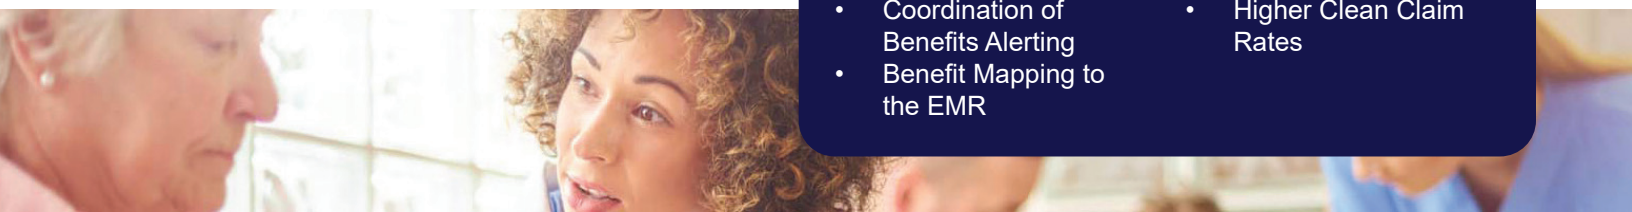

Laurie Mires, Patient Financial Services Coordinator
 Cabinet Peaks Medical Center

Features

- Coverage Discovery
- Automated and Manual
- Self-Pay Verification
- RTE, 270/271, HL7
- Auditing with Real-Time Alerts
- Coverage Change Screening
- Threshold Alerts
- Coordination of Benefits Alerting
- Benefit Mapping to the EMR

Outcomes

- Full Use of Your Relevant 271 Eligibility Data
- Consistent Interpretations of Eligibility Responses
- Higher Speed of Registration
- Fewer Denials and Rejected Claims
- Higher Clean Claim Rates
