Order Manager

Real-time web-based physician ordering

The power of the web in your clinicians' hands.

AccuReg Order Manager allows physicians to send orders through our online portal for real-time scheduling and capture of CPT codes, patient demographics, insurance policy information, and other essential information. This added efficiency results in a reduced workload for the Patient Access team, and faster patient admission. So everyone wins.

Just what the doctor ordered.

Our electronic order management software uses artificial intelligence to drastically reduce patient registration errors. Physician ordering is done online through a user-friendly interface that ensures orders are legible, complete, tracked and confirmed. Your physicians and their staff want speed and convenience. Using AccuReg Order Manager saves time they would otherwise waste on less efficient communication channels, like phone calls and faxes.

> "

"Despite a 50% staff turnover rate this past year, we are back up in the 90% accuracy range thanks in large part to the training aspect of this tool. I don't know how we managed without it."

Joy Middleton, Patient Access Supervisor
Arkansas Methodist Medical Center

AccuReg Order Manager does the following:

- Saves clinicians' time spent on fax and phone calls
- Ensures physician orders are legible, complete, tracked and confirmed
- Notifies physicians as soon as the procedure is scheduled and an account number is created
- Verifies patient identity, address, eligibility, benefits, authorization and medical necessity
- Turns patient arrival into a fast, secure, positive experience

Accurate Physician Ordering is Essential to Saving Time and Money.
See why our A.I. driven electronic order management software fits the bill.
